# Lavi Tarar

Noida, India || Lavitarar134@gmail.com

github.com/lavitarar linkedin.com/in/lavi-tarar

## Skills

**Cloud & Data Tools:** AWS (S3, EC2, Lambda), Snowflake
**Data Engineering:** ETL Pipelines, Spark, Apache Airflow, Git, GitHub
**Other:** REST APIs, Docker, Medallion Architecture
**Language:** Python, SQL (Advanced), Query Optimization

## Work Experience

**ElectriHub, Noida** **July 2025 - Present**

***SQL Developer***

- Developed and optimized complex SQL queries using joins, CTEs, and window functions to extract insights from large datasets and support data-driven business decisions.
- Automated web testing using Selenium by creating scripts to validate user workflows and application functionality, enhancing testing efficiency and reducing manual testing efforts.
- Built an end-to-end data pipeline from database to Power BI using Medallion Architecture (Bronze, Silver, Gold), transforming raw data into optimized, analytics-ready datasets and delivering interactive dashboards for actionable business insights.
- Designed and implemented stored procedures to automate data processing, improve query performance, and ensure efficient and reliable data retrieval for reporting and analysis.

**Radiant, Noida (Internship)** **May 2025 - July 2025**

***Market Research Analyst***

- Forecasted business growth and trends using Excel and Power BI for data-driven decision-making.
- Analyzed internal operations and competitor data to identify improvement areas and optimize performance.
- Designed and executed marketing campaigns, improving lead conversion and reducing sales cycle time.
- Conducted market research and built targeted company databases using tools like ZoomInfo, Naukri, and Bloomberg.

## Education

**Sharda University**

Master of Computer Application (MCA) **July-2025 – June-2027**

**Choudhary Charan Singh University**

Bachelor of Computer Application (BCA) **June-2022 – Aug-2025**

## Project Work

### Flight Operations Data Pipeline (Airflow, Docker, REST API)

- Built an end-to-end data pipeline using Apache Airflow and Docker containers to automate data workflows.
- Built an end-to-end data pipeline using Apache Airflow and Docker, extracting data from REST APIs and processing it through Medallion Architecture (Bronze, Silver, Gold).
- Transformed and optimized data using Python and SQL, delivering analytics-ready datasets and interactive dashboards for business insights.
- Built optimized datasets and visualized insights through dashboards to support data-driven decision-making
- Designed an end-to-end ETL pipeline using Airflow, Docker, and REST APIs, ensuring efficient data ingestion and transformation across Medallion layers.
